Rationale	Graduates in the applied social sciences are often required to manage complex tasks in integrative ways during the outworking of their professional roles and responsibilities. They require specific knowledge and skills to effectively manage a range of tasks and challenges relevant to contemporary applied social sciences contexts. This unit develops understanding of and capacity for management as it is outworked in specific applied social sciences arenas. It builds on prior knowledge regarding social sciences contexts and on Christian worldview underpinnings gained in the course to establish a management framework that will drive transformative action. It explores core management competencies and their application to applied social sciences endeavours by means of discussion and critical analysis of real life management challenges.
