

## CHRISTIAN HERITAGE COLLEGE

MT210

## **CALCULUS 3**

This sample unit outline is provided by CHC for prospective and current students to assist with unit selection.

Elements of this outline which may change with subsequent offerings of the unit include Content, Required Texts, Recommended Readings and details of the Assessment Tasks.

Students who are currently enrolled in this unit should obtain the outline for the relevant semester from the unit lecturer.

Unit code	MT210		
Unit name	Calculus 3		
Associated higher education awards	Bachelor of Education (Primary) Bachelor of Education (Secondary) Bachelor of Arts/Bachelor of Education (Secondary)		
Duration	One semester		
Level	Advanced		
Core/elective	Required for a minor in Mathematics		
Weighting	Unit credit points:10Course credit points:Bachelor of Education (Primary)320Bachelor of Education (Secondary)320Bachelor of Arts/Bachelor of Education (Secondary)320		
Delivery mode	Face-to-face on-site		
Student workload	Face-to-face on site     30 hours       Contact hours     30 hours       Reading, study and assignment preparation     120 hours       TOTAL     150 hours		
	Students requiring additional English language support are expected to undertake an additional one hour per week.		
Prerequisites/ co-requisites/ restrictions	Prerequisite: 20 credit points of 100-level Mathematics units		
Rationale	A calculus course usually starts with the formula for a function and then computes its rate of change. Often in life the formula is the unknown that one desires to find. This is where differential equations are valuable. A differential equation relates some function (representing physical quantities) with its derivatives (rates of change). Because this relationship is extremely common in the physical world, reflecting the logical, dynamic and complex nature of its Creator God, differential equations play a significant role in many disciplines, including engineering, physics, economics and biology. Therefore, it is important to understand differential calculus and linear algebra. This unit extends the range of fundamental mathematical knowledge and skills available to enable students to analyse physical processes mathematically. Students will advance their understanding of differential equations, linear algebra and multivariable calculus and explore their applications in many contexts.

	Stroud, K. (2011). Advanced engineering mathematics. (5th ed.). South Norwalk, CT: Industrial Press.		
	In addition to the resourc modern translation such a Holy Bible: New King Jam	es above, students should have access to a Bible, preferably a as The Holy Bible: The New International Version 2011 (NIV) or The es Version (NKJV).	
	These and other translation The Bible app from LifeCh	ons may be accessed free on-line at <u>http://www.biblegateway.com</u> . hurch.tv is also available free for smart phones and tablet devices.	
Content	<ol> <li>Differential Equations and Series: direction fields, first and second order linear ODEs, Taylor series, Fourier series, Euler's method</li> <li>Multivariable Calculus: differentiation, derivatives, maxima/minima problems, line and work integrals, independence of path, Green's theorem</li> <li>Linear Algebra: vectors, linear algebraic equations, eigenvalues and eigenvectors, vector dimensions, matrices, transformations</li> </ol>		
Specialist resource requirements	Casio fx-82AU PLUS II scientific hand-calculator or equivalent		
Learning outcomes	On completion of this uni	t, students will have demonstrated that they have:	
(	<ol> <li>demonstrated a working knowledge and understanding of multivariable calculus, differential equations, and linear algebra;</li> <li>developed and applied advanced mathematical skills to concepts of Differential Equations and Series, Multivariable Calculus and Linear Algebra to solve mathematical problems;</li> <li>appreciated the logic, complexity and dynamic nature of mathematics in relation to its reflection of both the character of God and His creation;</li> <li>applied critical and methodological rigour to effectively communicate mathematical concepts and arguments, using either written English or mathematical notations, as appropriate) and</li> <li>communicated at an appropriate tertiary standard: with special attention to design elements, grammars, usage, logical relations, style, referencing and presentation.</li> </ol>		
Assessment tasks	Task 1: Folio		
	Word Length/Duration:	1 each week	
	Weighting:	20%	
	Learning Outcomes:	1, 2, 4, 5	
	Assessed:	Weekly	
	Task 2: Investigation Re	port	
	word Length/Duration:	2,000 words	
	weighting:	5U70	
	Learning Outcomes:	1-5 Wook 7	
	A33E33EU.		

	Task 3: Examination		
	Word Length/Duration:	3 hours	
	Weighting:	50%	
	Learning Outcomes:	1-5	
	Assessed:	Examination Week	
Unit summary	This unit extends the range of fundamental mathematical techniques available to students to enable them to analyse physical processes mathematically. Students will advance their understanding of differential equations, linear algebra and multivariable calculus and explore their applications in many contexts.
